## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 23-25 are drawn to a semiconductor structure, classified in class 257, subclass 374.
- II. Claims 1-22 are drawn to a method of forming a semiconductor structure, classified in class 438, subclass 207.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the device is made by forming a gate electrode on a substrate, forming sidewall spacers on the gate, and depositing a diffusion region in the substrate and then removing the sidewall spacers, but alternatively the device could be made by forming a mask on the substrate, depositing a diffusion region in the substrate, removing the mask, and forming a gate electrode, wherein the same device would be made.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2826

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
